

VEHLIVE

Most general-purpose vehicles equipped with a 315 or 433 MHz (TPMS) tire pressure monitoring system must perform a "sensor relearning procedure" after tire sensor replacement, tire repositioning, and sensor receiver module replacement. Sensor activation during the tire pressure relearning procedure can be performed using this dedicated tire pressure tool.

The TPMS reset tool helps you reset all your tires easier in just 3 steps. Make sure the vehicle is in TPMS learning mode and place the right antenna against the tire sidewall near the valve stem. Press the button while holding the tool against the sidewall of the tire.

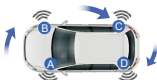

## 1 Enter Learning Mode

1. Make the gear in P position.
2. Use cruise to choose TPMS re-learn mode in the dashboard settings.
3. Horn will ring once and TPMS indicator flashes, then learning mode has been entered successfully. If equipped, the message center will display the front left (LF) tire.

sensors : Front left front right , rear right , reareft.

4. After all sensors reset the car horns twice means TPMS relearn finished.

## 2 To Rest TPMS Sensors

1. Set the car in TPMS learning mode. (car horns twice)
2. Starting relearn process from left front tire, point antenna on correct position. Press hold power button. Once the speaker chirped, move to the next tire.
3. Follow this order to reset TPMS

Note: Battery not included

## Tips for user:

1. Please make sure antenna fit in  
CORRECT position.

2. Please make sure the 9V battery  
is with enough power.

3. Sensors should be original OEM  
sensors which well programmed.
