USB Splitters Instruction

Fast charging: Plug one of the integrated USB cables into your portable device
The power cord and another cable are connected to the front USB port

Most problem you may meet:

Q: The right or left side of the charger doesn't work?

A: it may cause from the two sides of the wireless charger are not uniformly charged. Follow below step:

- ① The car has 2 USB ports. Check whether the cable is plugged in correctly or the car's port is faulty.
- ② If the plug is correct, you can let the customer try the left line to the right port and the right line to the left port. then we can check whether it is a wireless charging problem or a power supply problem.

Q: Does not fast charge my phone wirelessly?

A: ① Confirm the model of the phone first, because no matter what kind of charger is used, first depends on the power provided by the vehicle, and secondly on which mobile phone (Apple's maximum power is 7.5w, Samsung Huawei, etc. is 10w).

② It maybe cause from too many programs in the background of the mobile phone, Try closing some of the background programs, especially navigation.

Q: Did not responsiveness of the charger to the phone?

A: Please check your phone case, Try to keep the phone case below 0.4mm thickness. Metal can not work, which will interfere with the wireless charging coil.

Q: Rattles when driving?

A: Comes with sticky pads to keep it in place and stop any vibration noise.
